

DRIVEN SOFTWARE

# Agile: A Business Perspective

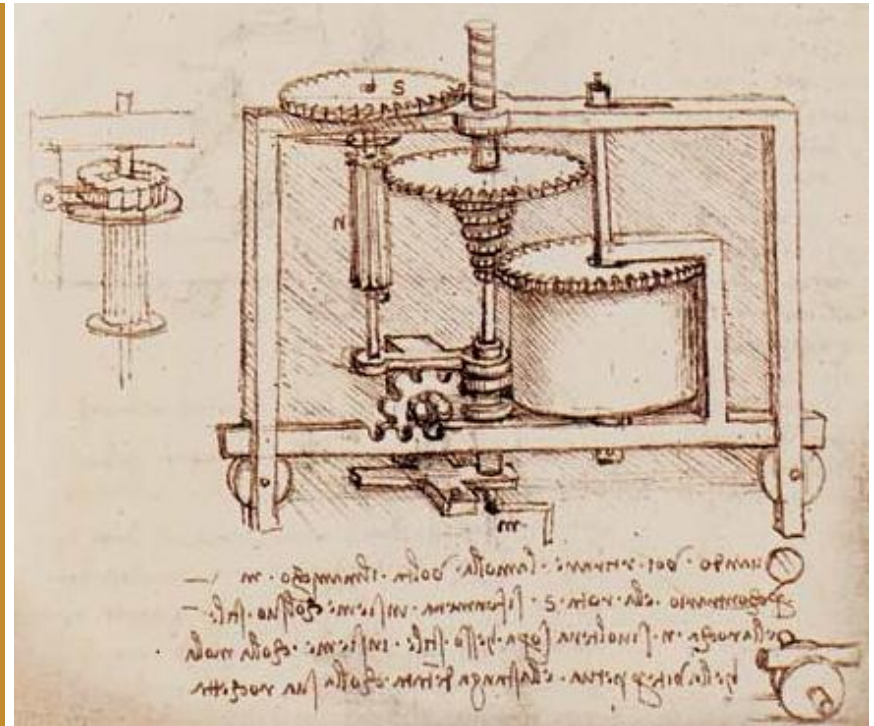

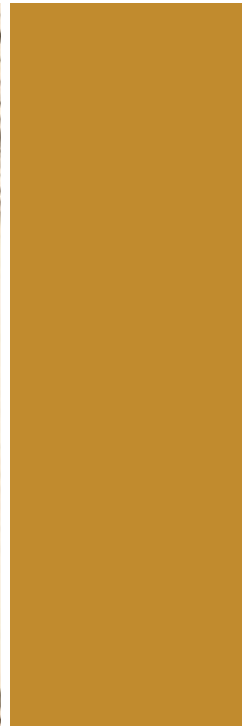

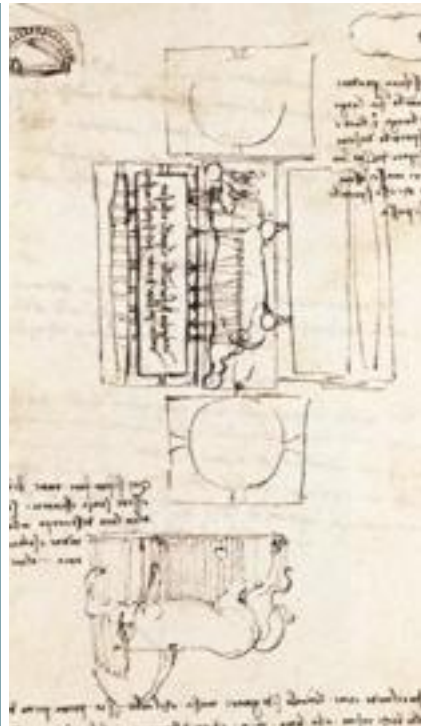

The Driven's Agile: A Business Perspective workshop is a 1-day hands-on program designed to explore why there is a mind-shift towards a more "AGILE" approach. In order to understand the essence of Agile, we take the delegates through a hands-on and interactive learning experience.

## GENERAL CONCEPTS

A combination of simulation, theory sessions and serious-play games are employed to give attendees a first-hand visceral experience, as well as the necessary broader context of what 'Agile' means.

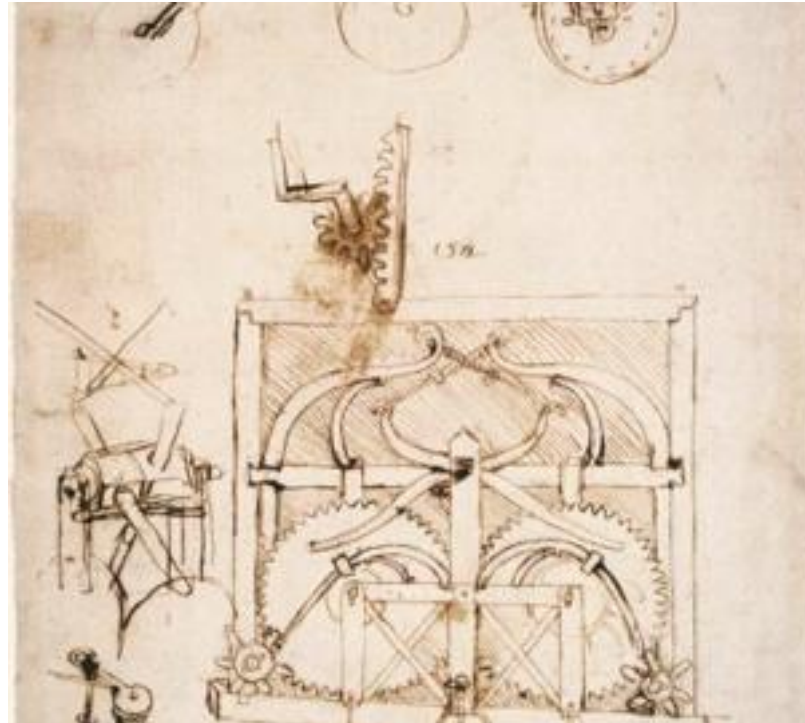

We explore the direction in which the business world is progressing and provide principles which cover building the right organisation, building the right thing and building the right organisation.

In essence – we explore what does Agile in mean beyond a strictly software development environment.

**DRIVEN 2 KNOW**Johannesburg, South Africa. [workshops@drivensoftware.com](mailto:workshops@drivensoftware.com)

Driven Software's training & workshop programs are immersive, hands-on, interactive experiences.

We learn by doing. Individuals understand concepts more effectively if they can see it in action, explore it through robust discussion and experience it first hand for themselves.

## CUSTOMISED

Best results are achieved when measurable, targeted outcomes are determined for the team(s) attending. Working with you to understand your specific challenges, we then use our coaching experience to tailor the program to address them.

## PRICING

- Contact [workshops@drivensoftware.com](mailto:workshops@drivensoftware.com) for further details regarding pricing and further details.
- Minimum group size for internal workshops is 6, volume discounts available on request.
- An abridged half-day program is also available (recommended for customer / business alignment).
