

DRIVEN SOFTWARE Git Workshop

Driven's Git Workshop Course is a practical, hands-on, one day program split into two sessions...

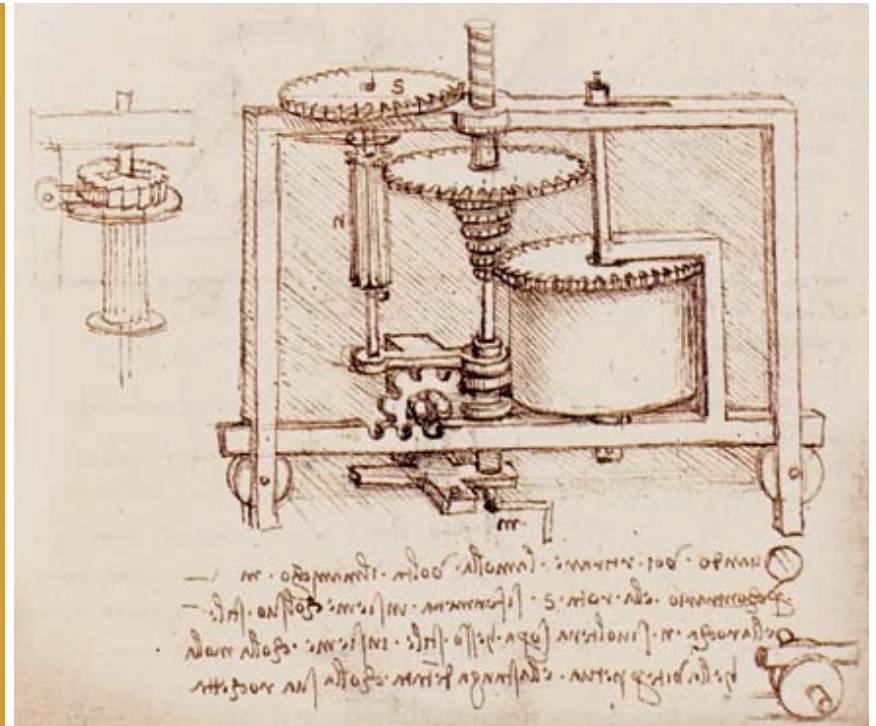

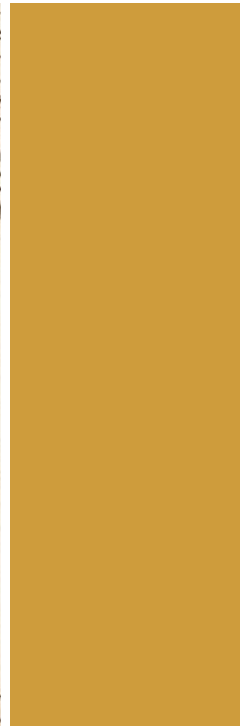

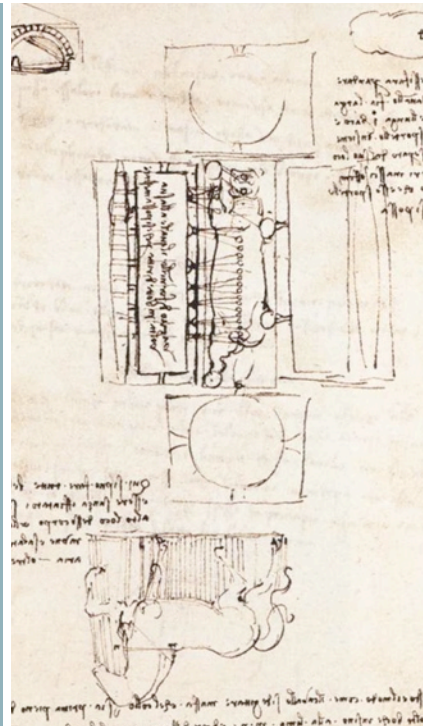

SESSION ONE : USE

At the end of session one attendees will understand the major features of Git and have the knowledge to use it effectively.

SESSION TWO : ADOPT

At the end of the second session attendees will understand more about using Git in a collaborative environment.

They will be aware of how to transition to Git from other version control systems, integrate it with external applications as well as common patterns for adapting their team process to best leverage it.

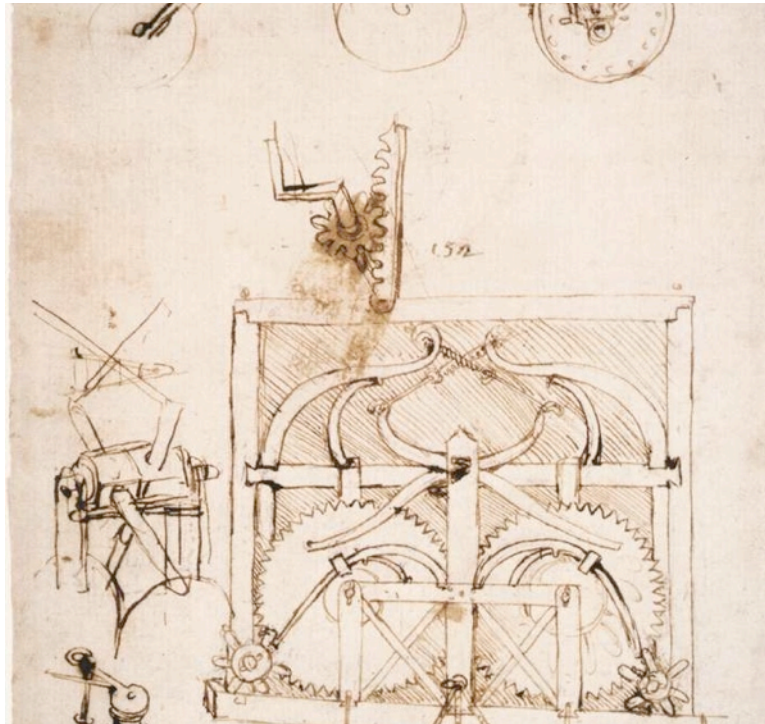

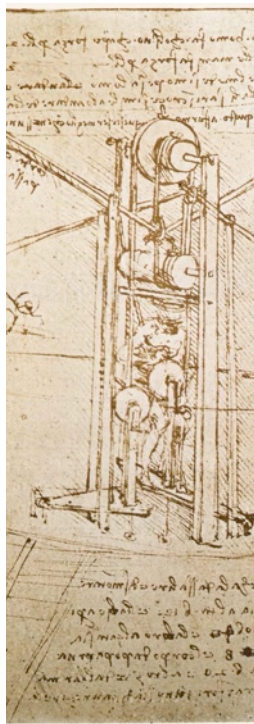

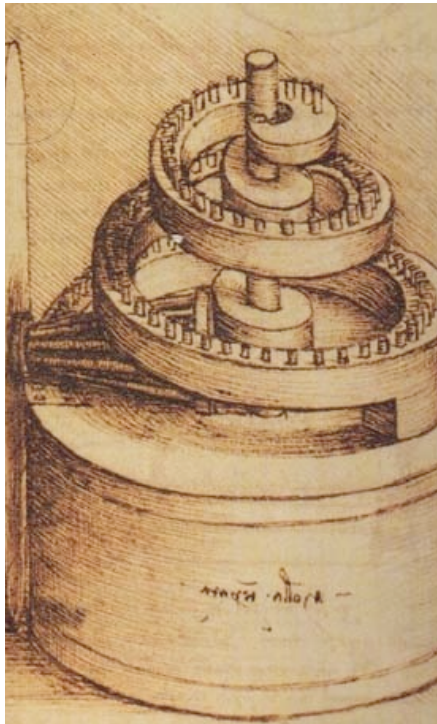

DRIVEN SOFTWARE WORKSHOPS

Johannesburg, South Africa. workshops@drivensoftware.com

Driven Software's workshops go beyond training - they're immersive, hands-on, interactive experiences.

Git is a cross-platform, distributed version control system. It is often the best fit for teams that work in an Agile/Iterative environment.
