DRIVEN2KNOW

Software Craftsmanship Sessions

Are your software development efforts being obstructed by **quality issues**, **constant rework** or **ineffective delivery**? The Driven2Know Software Craftsmanship Sessions can help your people to advance to the next level.

Led by practitioners with deep, practical and current experience the sessions will introduce your people to more effective principles, practices, tools and techniques. It will also provide a platform to which they can bring their current challenges to get peer feedback and problem solving.

Session Program

We expect the following topics to be explored during the program:

- Principles, Patterns and anti-patterns of great software (e.g. SOLID principles)

- Software craftsmanship techniques (e.g. Test Driven Development, Continuous Integration, Automation)

- Effective development processes (e.g. Scrum, XP, Lean, Kanban)

- Tooling (e.g. Git, Mocking frameworks, DI Containers)

- Improving poor quality code (e.g. refactoring, automated testing)

DRIVEN2KNOW WORKSHOPS
Johannesburg, South Africa. driven2know@drivensoftware.com

Driven2Know's workshop programs are immersive, hands-on, interactive experiences.

driven2know

Researchers have found 10-fold differences in productivity and quality between different software developers with the same levels of experience and also between different teams working within the same industries.

FURTHER INFO

- All presenters are professionally active in industry.

- Workshop sessions will take place in Sandton, Johannesburg

- 3 month program, starting August 2013 and taking place 15h30-18h30 every second Thursday.
